

FINGER GUARD (HINGED DOORS & GATES)

Introduction - Special Care for Elderly & the Intellectually Disabled

Protect Your Fingers from Unpleasant Accidents

Every year, hundreds of accidents happen when children or the aged get their fingers trapped in doors in public places, or even at home. In many countries it is compulsory to fit accident prevention systems in public places (BS7036 / EN 16654:2015), but we go even further by offering a series of tools ideal for making all domestic or public spaces safe, such as hotels, hospitals, public offices and schools.

The Digisafe system consists of an aluminum profile that offers total protection at the internal shear point between door and frame.

Elegant and understated, Digisafe system can be discretely adapted to all types of doors, maintaining the technical qualities unchanged while offering excellent aesthetic characteristics.

Safe . Detachable . Hygienic

FINGER GUARD (HINGED DOORS & GATES)
